

NOMADESK®

Easy and secure file sharing, wherever you are.

www.nomadesk.com

Easy and secure file sharing, wherever you are.

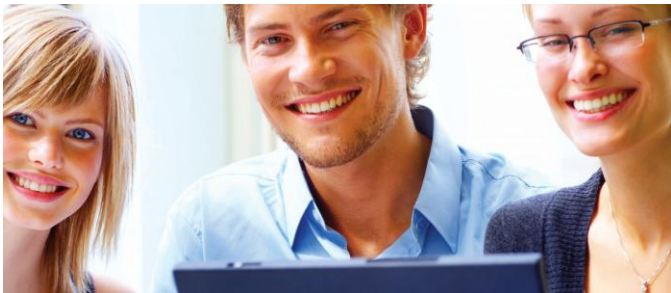

Easy to Use

A simple drag & drop will do the trick. NomaDesk Fileservers appear as Windows® drives on your computer. To share files all you do is drag & drop them into your Fileserver.

How it works

Your files are copied across a unique distributed file system. It includes your PC, the NomaDesk servers, and computers of the people you are sharing files with. When you place files into your NomaDesk Fileserver on your PC, NomaDesk will automatically sync them across the rest of your network.

Because a copy of your files is always available on your computer, it means you can access your files wherever you are – **whether online or offline.**

Lock-Box Safe

NomaDesk's 256-bit encryption keeps files safe and confidential, only to be unlocked by your username and password.

And if your laptop is ever lost or stolen, you can report it online using TheftGuard™. The moment your computer is reconnected to the Internet, your Fileserver will be remotely deleted.

Built for Nomadic Professionals

NomaDesk was built for nomadic professionals – consultants, solo business owners, SMB's, and boundary-spanning "virtual" teams that spend a lot of time outside of the office. These pros use NomaDesk because it's ultra-secure and they can share files at any time, wherever they are.

Business Class Features

Receive Files with Email2Folder™

Documents can be sent to you via NomaDesk through email attachments. These are automatically stored on your Fileserver.

Send Files with FileLink™

Email files without using heavy attachments. NomaDesk sends any-sized file through a web-based link on your behalf.

Simplify document sharing, economically

There's no need for expensive servers, complex software or high-priced IT personnel. All Fileservers seamlessly integrate with Windows® Explorer and appear as Windows® drives.

Share large files without draining bandwidth

Exclusive Delta-sync™ technology synchronizes only the modified portion of files instead of the entire file. Result: hassle-free file sharing while maximizing network bandwidth.

About NomaDesk

Founded in 2004, NomaDesk delivers document collaboration with emphasis on security, automatic back up, online/offline file access and ease of use. The company has offices in Europe and the United States.
